# WEEKLY HEALTH REPORT

## NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

### MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

### MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

### STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

### EXPLANATORY MATTER

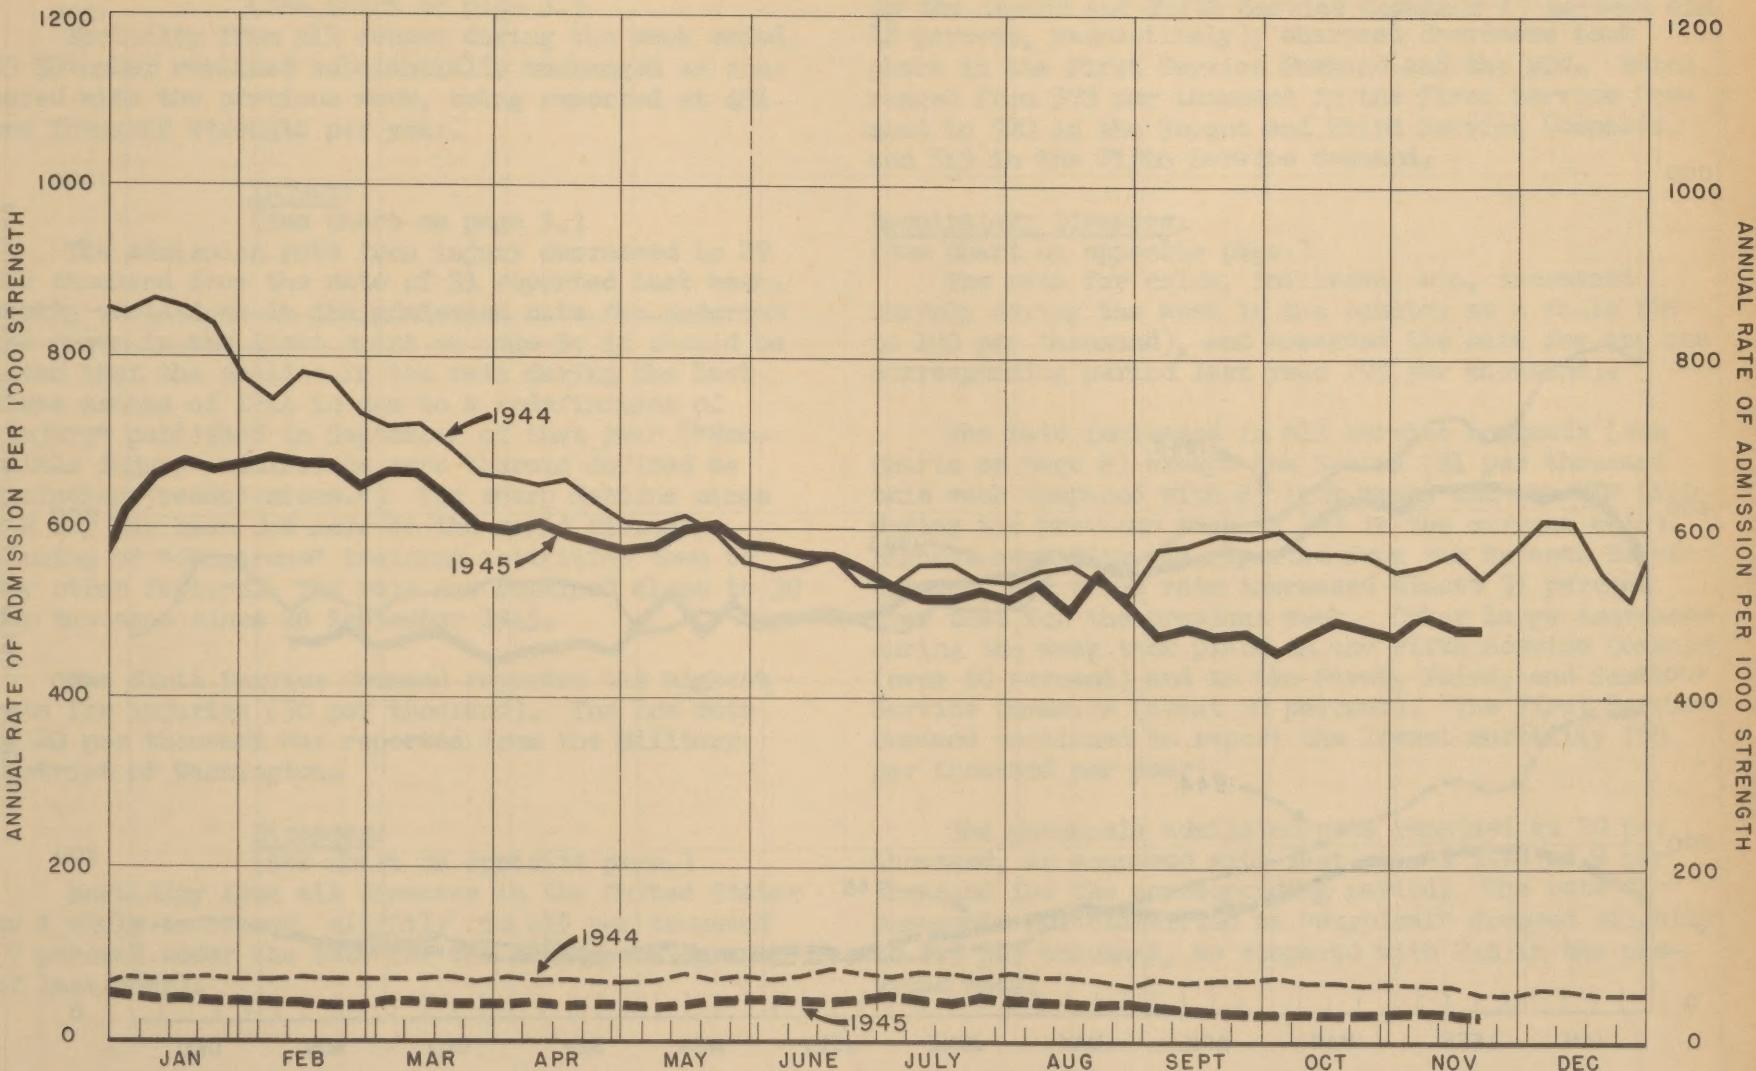

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (#) is placed after the name of the station.

CONTINENTAL UNITED STATES

## COMMENT ON CURRENT TRENDS

### MORBIDITY FROM: All Causes:

(See Chart on page 3.)

Morbidity from all causes during the week ended 23 November remained substantially unchanged as compared with the previous week, being reported at 484 per thousand strength per year.

### Injury:

(See Chart on page 3.)

The admission rate from injury decreased to 29 per thousand from the rate of 31 reported last week. ~~Weekly variations in the admission rate for injuries are shown in the inset chart on page 3;~~ it should be noted that the decline in the rate during the last three months of 1944 is due to a redefinition of "injury" published in September of that year ("Non-battle injury" admissions were therein defined as excluding "readmissions.") The sharp decline since V-E day has been due more to the rapid discontinuing of "dangerous" training activities than to any other factors. The rate has remained close to 30 per thousand since 28 September 1945.

The Ninth Service Command reported the highest rate for injuries (36 per thousand). The low rate of 20 per thousand was reported from the Military District of Washington.

### Diseases:

(See Chart on opposite page.)

Morbidity from all diseases in the United States as a whole increased slightly to 455 per thousand (7 percent under the rate for the corresponding week of last year).

The disease admission rate increased substantially in the Second and Fifth Service Commands (7 percent and 13 percent, respectively); sharpest decreases took place in the First Service Command and the MDW. Rates ranged from 378 per thousand in the First Service Command to 520 in the Second and Third Service Commands and 513 in the Fifth Service Command.

### Respiratory Diseases:

(See Chart on opposite page.)

The rate for colds, influenza, etc., increased sharply during the week in the country as a whole (88 to 103 per thousand), and exceeded the rate for the corresponding period last year (93 per thousand).

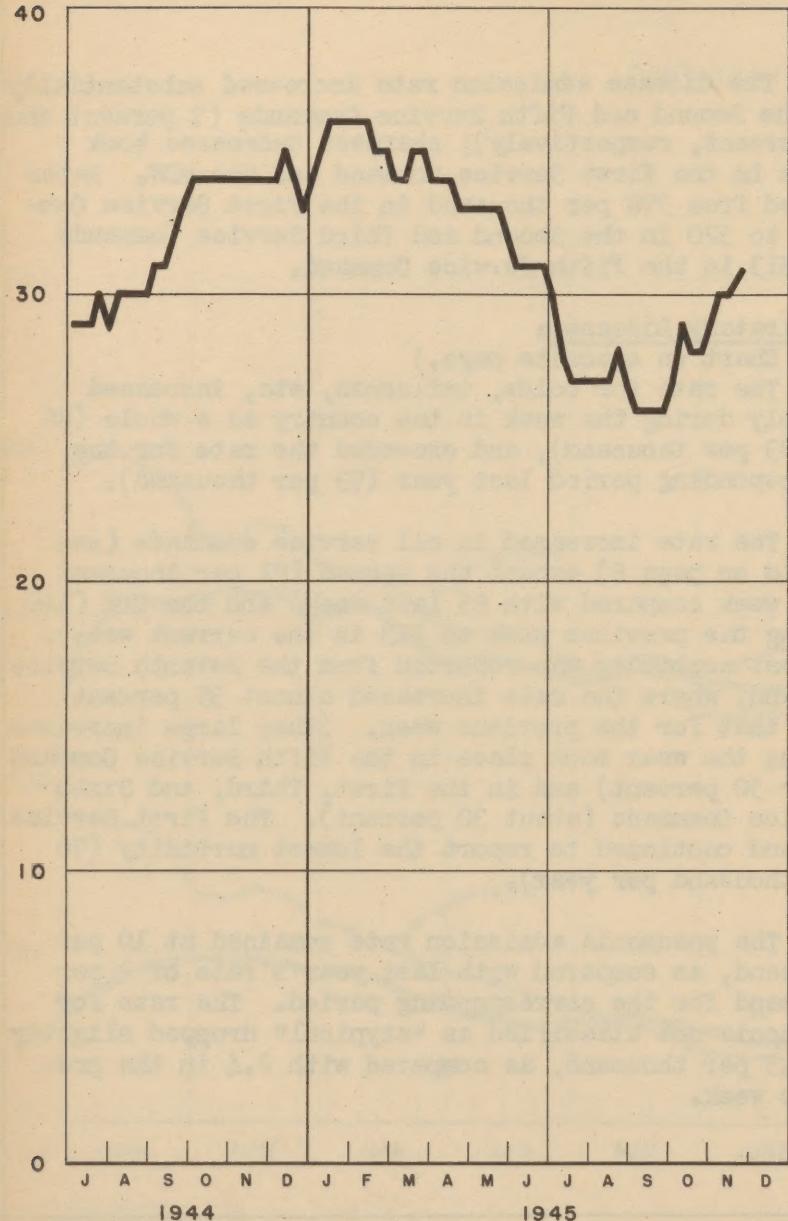

The rate increased in all service commands (see Charts on page 8) except the Second (81 per thousand this week compared with 85 last week) and the MDW (140 during the previous week to 123 in the current week). Highest morbidity was reported from the Seventh Service Command, where the rate increased almost 35 percent over that for the previous week. Other large increases during the week took place in the Fifth Service Command (over 50 percent) and in the First, Third, and Sixth Service Commands (about 30 percent). The First Service Command continued to report the lowest morbidity (70 per thousand per year).

The pneumonia admission rate remained at 10 per thousand, as compared with last year's rate of 9 per thousand for the corresponding period. The rate for pneumonia not classified as "atypical" dropped slightly to 2.3 per thousand, as compared with 2.4 in the previous week.

NUMBER OF PATIENTS REMAINING

## COMMENT ON CURRENT TRENDS (CONT'D)

Pneumonia admission rates increased in the First, Seventh, Eighth, and Ninth Service Commands and the MDW. Highest morbidity from these causes was reported in the Eighth Service Command (13 per thousand).

Venereal Diseases:

Morbidity from venereal diseases (excluding EPTS cases) decreased by about 10 percent during the week to 56 per thousand per annum.

Morbidity from these causes decreased or remained substantially unchanged in all service commands except the Second and the MDW. Highest rates were noted in the Third and Fourth Service Commands (69 per thousand), lowest (35 per thousand and 37 per thousand), in the MDW and the Ninth Service Command.

Other Communicable Diseases:

Morbidity from diarrhea and dysentery remained low (3 per thousand).

NON-EFFECTIVE RATE:

(See Chart on page 6.)

The non-effective rate for personnel stationed in the continental United States is estimated at 30.9 per thousand strength for the week ended 23 November as compared with 34.0 per thousand for the corresponding week of 1944.

PATIENTS REMAINING UNDER TREATMENT: 23 NOVEMBER 1945:  
(See Chart on page 6.)

The number of patients remaining in hospital in the Zone of Interior, including patients transferred from overseas, decreased during the week to 191,207, as compared with 197,471 at the end of the previous week.

The number of neuropsychiatric cases remaining was 14,803 or about 1100 fewer than at the end of the previous week. Non-battle injury patients remaining numbered about 32,910. The number of battle casualty patients remaining decreased by about 2500 to number 52,760.

CERTIFICATES OF DISABILITY FOR DISCHARGE:

(See Chart on page 9.)

In the week ended 23 November there were 7646 enlisted personnel discharged by CDD, (about the same number as in the previous week). Fifty-six percent of these discharges were reported by general hospitals and 24 percent by convalescent hospitals. Among these CDD's were 1479 neuropsychiatric cases, about 250 less than in the previous week.

# COMMENT ON RECENT DEVELOPMENTS

FOR THE FOUR WEEK PERIOD ENDED 26 OCTOBER 1945

## NATURE OF THE DATA:

The data of this Monthly Report, like those of the Weekly Health Reports, have been taken from WD AGO Forms 8-122 rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. However, unlike the Weekly Health Reports which are compiled on the basis of the figures as received, so as to place the information in circulation at the earliest possible time, the figures here presented for the four week period ended 26 October 1945 include the great majority of the corrected reports as well as reports received too late to be incorporated in the Weekly Health Report.

This Report covers morbidity and mortality data for all individual stations with a strength of 1000 or over and gives details for admissions from venereal diseases and for neuropsychiatric cases.

Charts showing morbidity trends from all causes, from all diseases combined, from injury, and from colds, influenza, etc. are presented on page 24. Similar charts for specified diseases appear on pages 26, 27, and 28. Non-effective rates for the Army as a whole, among troops overseas and in Zone of Interior are shown on page 30. A chart showing mortality trends is presented on page 32. A summary for the month of the number of admissions and corresponding morbidity rates and of the number of deaths and corresponding mortality rates for the United States as a whole and for the service commands is given on pages 33 and 34. The most pertinent morbidity data for individual stations are presented on pages 35 to 55. On pages 56 and 57 the seven stations with the highest rates of admission during the month are shown for each

of the morbidity categories considered.

In reading the detailed tables, it should be borne in mind that morbidity (or mortality) rates based on small numbers of cases are not reliable. For this reason the symbol "?" has been placed after rates computed on the basis of 5 or fewer cases. Attention is invited to the definitions of admissions and admission rates and the discussion of the proportion of total Army strength included in the stations covered by this Report as given on page 2. The term "month" in this report is used to denote the four or five-week period based on the number of Fridays in the calendar month.

## MORBIDITY FROM ALL CAUSES, DISEASE, AND INJURY:

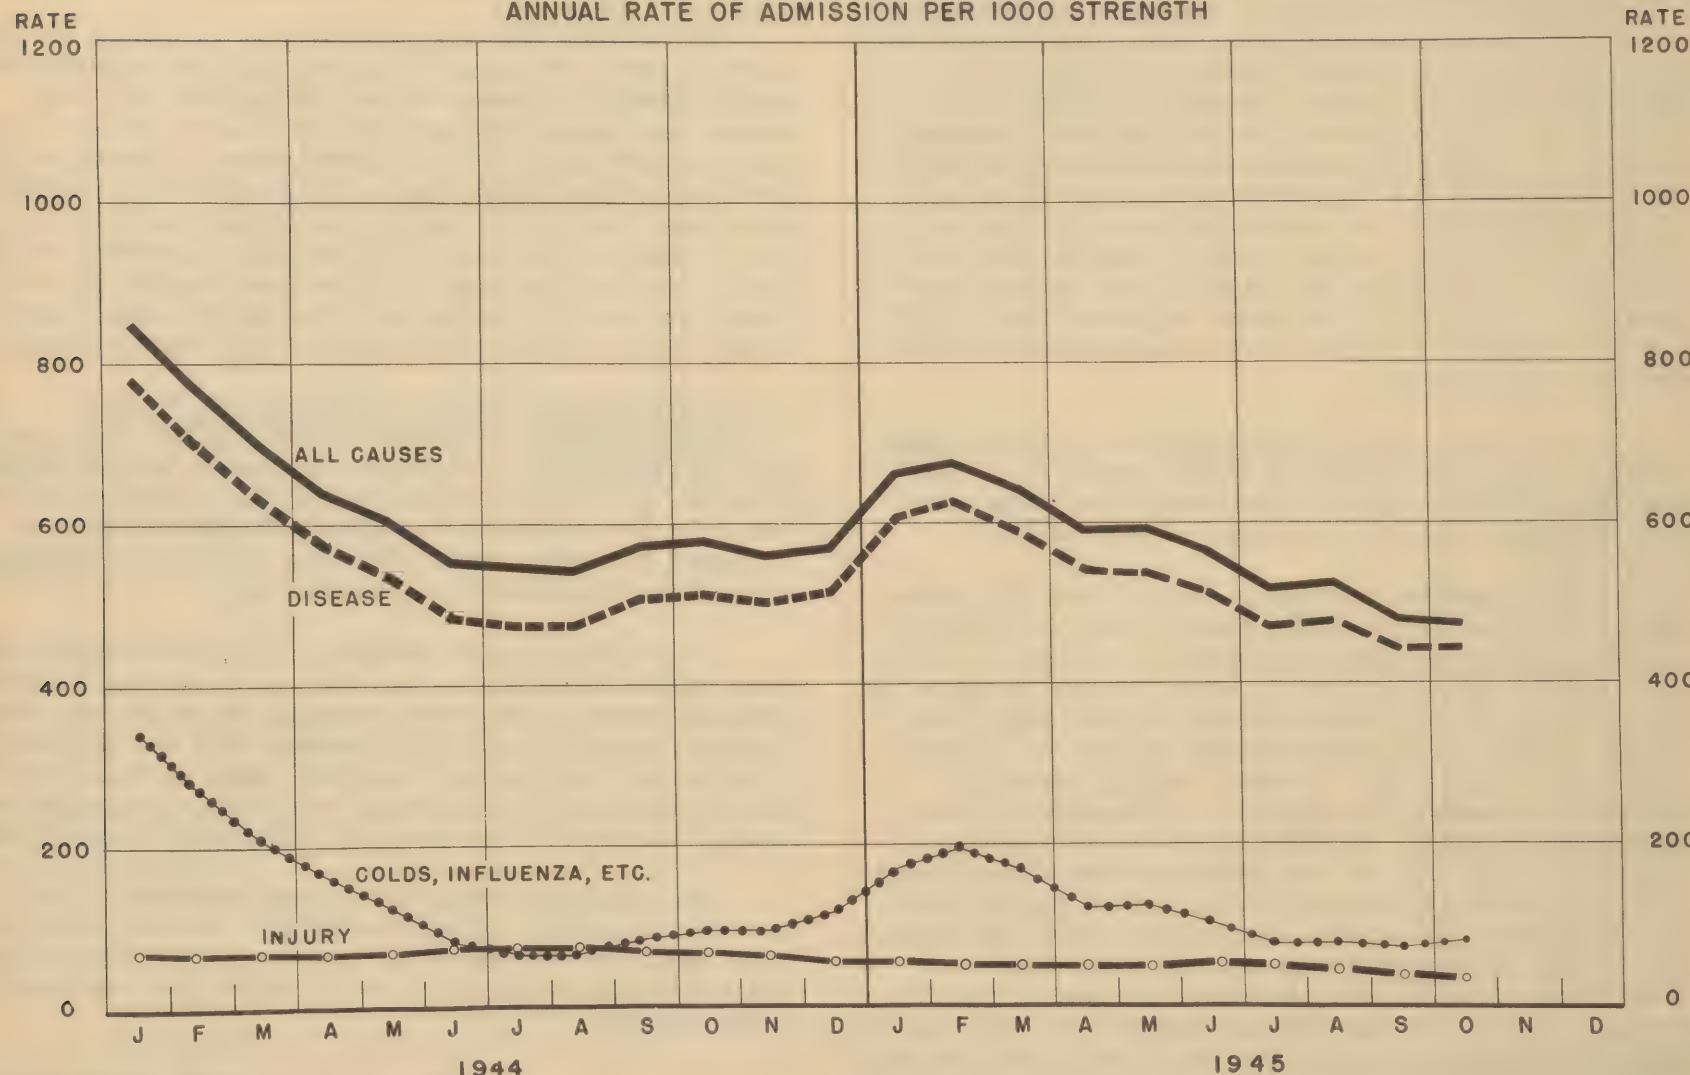

The admission rate for all causes for the Army in the continental United States decreased to 474 during October, as compared with 478 for the previous month. The rate for diseases increased slightly to 443 per thousand per year, while that for injuries decreased from 36 in September to 31 in October.

Relatively little change is noted in October disease admission rates in the service commands. Increases over September rates were reported by the First, Third, Seventh, and Ninth Service Commands and the Military District of Washington. However, only in the First and Seventh Service Commands were the increases more than 5 percent (11 percent and 8 percent, respectively).

The admission rate for injury decreased in all service commands, except the Sixth. Highest morbidity from injury was reported in the Fourth and Ninth Service Commands, with rates of 34 and 36 per thousand, respectively.

CONTINENTAL UNITED STATES  
ANNUAL RATE OF ADMISSION PER 1000 STRENGTH

## COMMENT ON RECENT DEVELOPMENTS (CONT'D)

RESPIRATORY DISEASES:

During October the admission rate for common respiratory diseases increased by 10 percent (72 per thousand to 79 per thousand). The rate of 92 per thousand reported for October, 1944, is 16 percent over that reported for the current month.

Increases in admission rates from these causes were reported from all service commands except the Sixth, where the rate dropped to 67 per thousand from 71 reported in September. Increases in the Fourth, Fifth, and Ninth Service Commands were less than 3 percent, ranging upward to 38 percent in the First Service Command. Rates ranged from 62 per thousand in the First Service Command to 132 in the MDW.

Morbidity from all forms of pneumonia increased from 7.7 per thousand in September to 8.3 in October, as compared with 8.1 in October of last year. The rate for "atypical" pneumonia moved from 6.0 in September to 6.2 per thousand in October. Increases in the rates for all forms of pneumonia took place in all service commands except the Fifth and Eighth.

DIARRHEA AND DYSENTERY:

Morbidity from diarrhea and dysentery decreased sharply to 4 per thousand from 7 per thousand in September, while the rates continued lower than those reported in the same periods last year. Only the Second and Fifth Service Commands reported rates in excess of 5 per thousand per annum; all service command rates were less than 6 per thousand.

VENEREAL DISEASES:

Morbidity from venereal diseases, excluding cases contracted prior to entry into service, remained high, decreasing slightly to 56.4 as compared with 56.6 per thousand in September.

The rate for syphilis acquired while in service increased from 5.8 per thousand in September to 6.7 in October, while that for venereal diseases other than syphilis and gonorrhea moved from 1.2 per thousand to 1.3.

Venereal disease rates increased markedly in the Third and Fourth Service Commands, decreasing or remaining substantially unchanged in other service commands and the MDW.

Morbidity represented by venereal EPTS cases was reported at 3.4 per thousand during October as compared with 4.3 per thousand in September. The average weekly number of venereal EPTS cases in October was 217, as compared with 291 in September.

SCABIES:

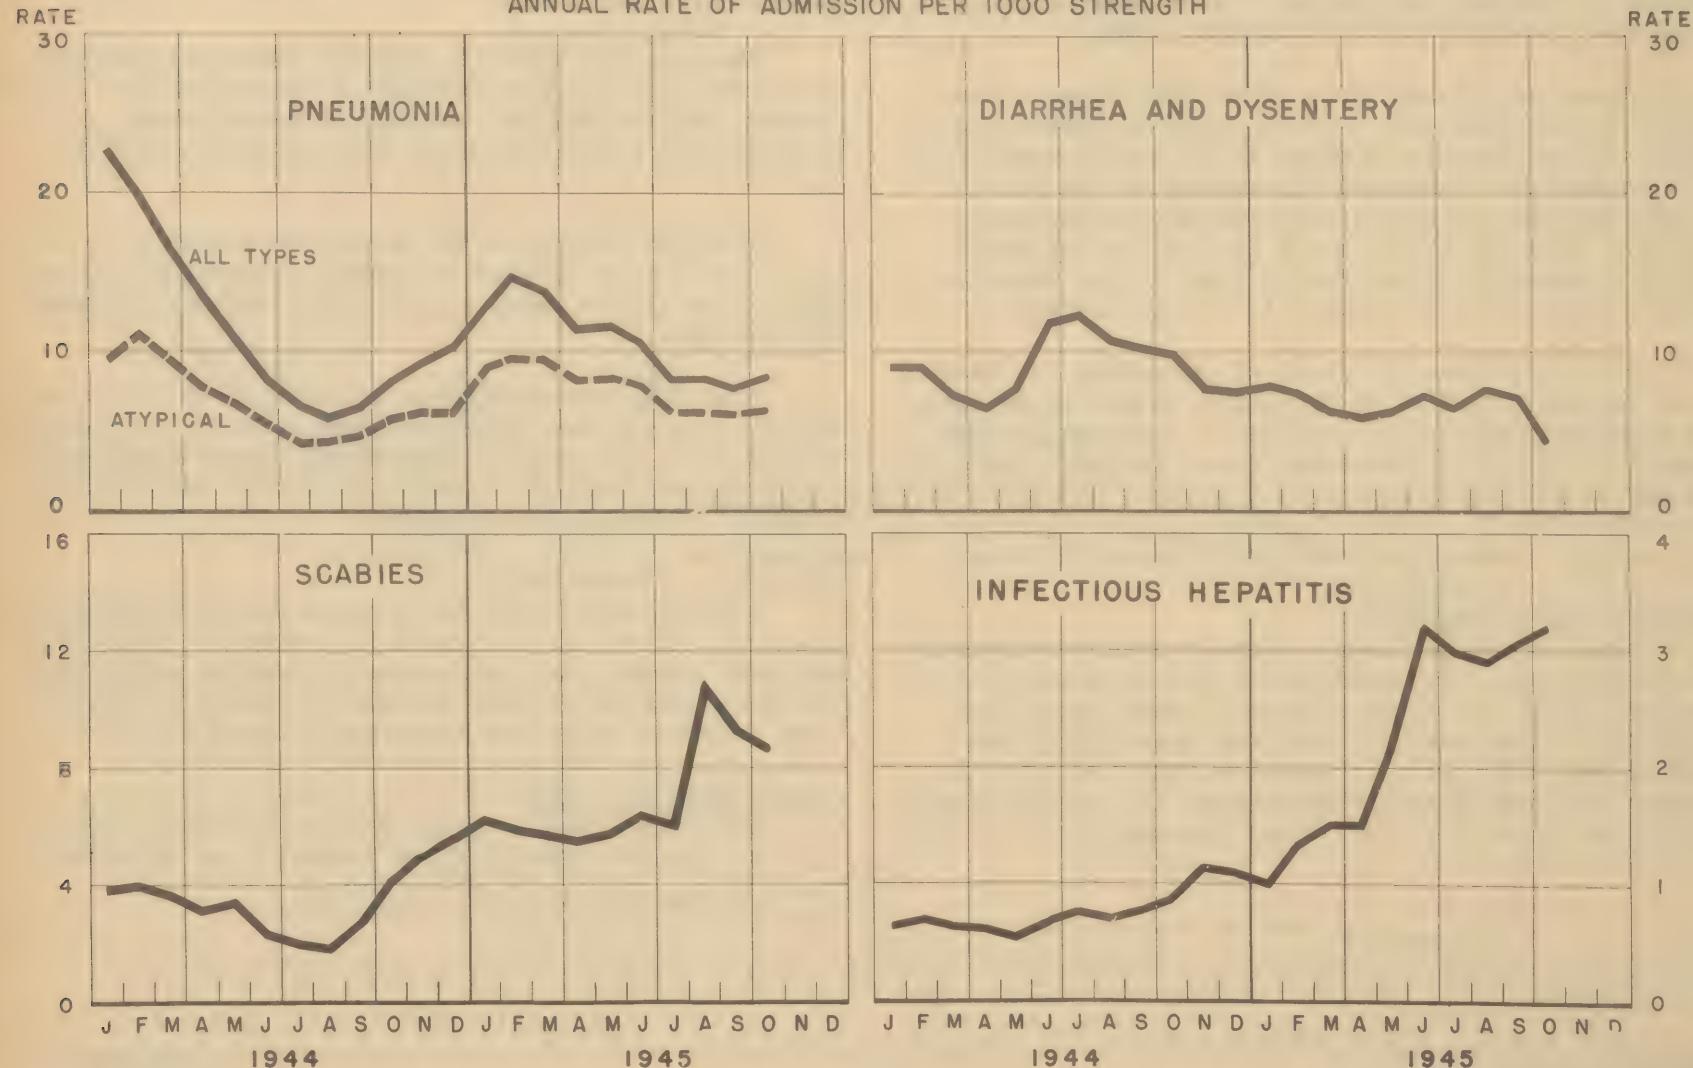

The admission rate for scabies dropped from 9.3 in September to 8.7 per thousand in October. Indications are that recent sharp increases in scabies admissions are consequences of examinations of personnel returned from overseas, prior to temporary duty or discharge.

INFECTIOUS HEPATITIS:

Morbidity from infectious hepatitis decreased to 3.2 per thousand from 3.5 per thousand in September.

CONTINENTAL UNITED STATES  
ANNUAL RATE OF ADMISSION PER 1000 STRENGTH

## COMMENT ON RECENT DEVELOPMENTS (CONT'D)

MEASLES:

Morbidity from measles increased to 26 cases per week during October, as compared with 17 weekly cases in September. The rate moved from 0.2 to 0.4 per thousand.

MUMPS:

Morbidity from mumps remained at 1.1 per thousand in October.

SCARLET FEVER:

Morbidity from scarlet fever remained at 0.2 per thousand in October, as compared with 0.4 per thousand reported in the same month last year. The Third and Eighth Service Commands reported a rate of 0.3 per thousand, while a rate of 0.6 was noted in the MDW.

MENINGOCOCCIC MENINGITIS:

Morbidity from meningitis decreased from 0.2 per thousand in September to 0.1 per thousand in October. The current experience contrasted with a rate of 0.3 during the corresponding period of 1944.

RHEUMATIC FEVER.

Morbidity from rheumatic fever remained at .5 per thousand for the third month. The First Service Command reported the highest morbidity from this cause (1.1 per thousand).

TUBERCULOSIS:

Morbidity from tuberculosis was reported at 2.5 per thousand in October, a sharp increase from the rate of 1.8 per thousand in September. The current relatively high level arises in large part as the result of examinations at separation centers which tend to uncover cases which otherwise would be undetected. The rate at stations other than separation centers was 1.7 per thousand in October.

As of 26 October there were 2540 cases of tuberculosis remaining under treatment, representing 1.2 percent of all patients in hospitals. Of the total cases, 1164 were at Fitzsimons General Hospital and 694 at Bruns General Hospital.

MALARIA:

Morbidity from malaria acquired inside the United States was reported at .1 per thousand in October. The number of cases presumably acquired outside the United States, which were admitted (or readmitted) for treatment in this country averaged about 380 per week, which is the lowest figure so far recorded this year.

As of 26 October there were 1201 cases of malaria under treatment, representing .5 percent of all patients in hospital. Of these, 6 cases were acquired in this country.

NEUROPSYCHIATRIC DISORDERS:

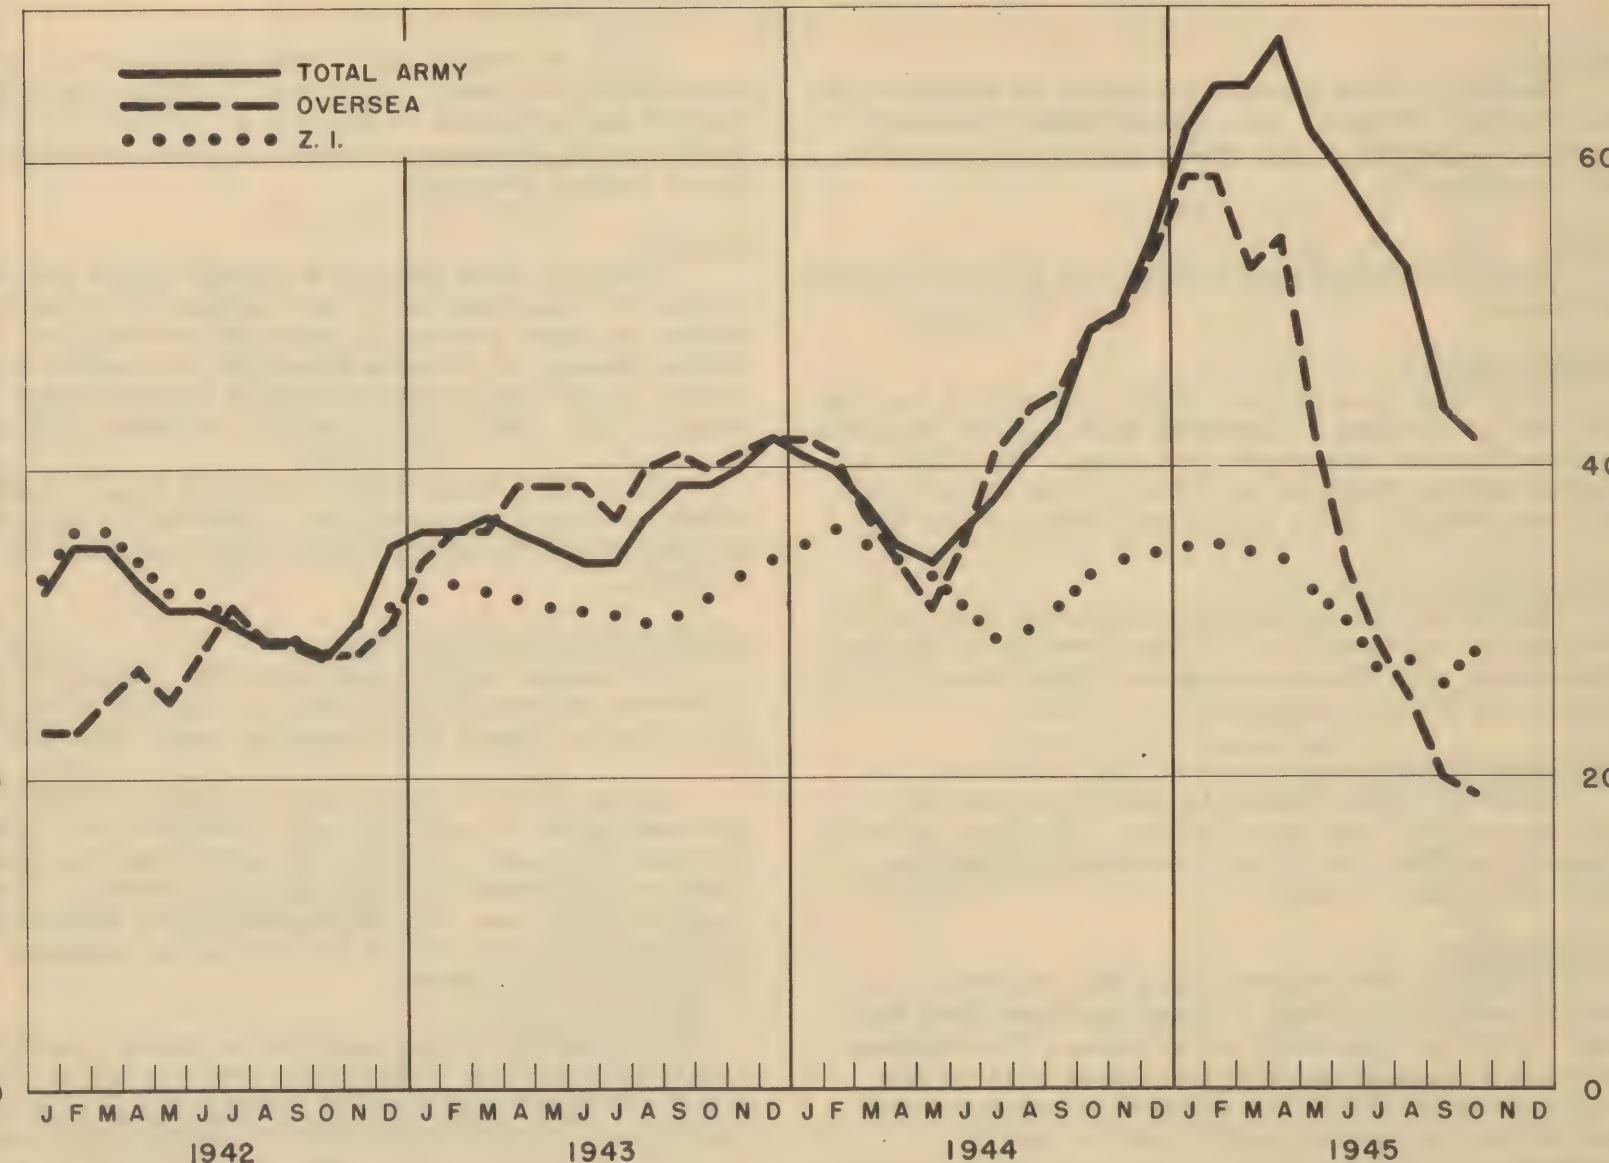

The annual rate of admission for neuropsychiatric disorders decreased in October to 22.8 per thousand, which is the lowest rate reported since December 1943.

During October there was an average of 2564 CDD's per week given to enlisted men classified as neuropsychiatric cases, or slightly lower than the weekly average for September (2718 CDD's per week). The CDD's in October for men with neuropsychiatric disorders represented 23 percent of all CDD's, as compared with 26 percent in September.

The number of neuropsychiatric cases remaining under treatment as of 26 October was 19,542 or about 7000 less than at the end of September. During October the number of locked ward cases decreased by about 600 to 3790, while open ward cases decreased by 29 percent. Neuropsychiatric cases remaining represented 8.9

# NONEFFECTIVES - TOTAL ARMY, OVERSEA AND ZONE OF INTERIOR TROOPS \*

\* ZONE OF INTERIOR RATE EXCLUDES PATIENTS EVACUATED FROM OVERSEA THEATERS AND REMAINING IN GENERAL AND CONVALESCENT HOSPITALS IN THE UNITED STATES. THESE PATIENTS ARE INCLUDED ONLY IN THE RATE FOR THE ARMY AS A WHOLE.

AVERAGE DAILY NUMBER OF NONEFFECTIVES PER 1000 TROOPS

## COMMENT ON RECENT DEVELOPMENTS (CONT'D)

percent of all patients in hospital, with open ward cases being 7.2 percent and locked ward cases 1.7 percent.

MORTALITY:

Mortality from all causes during October was reported at 1.57 per year per thousand strength. The mortality rate from disease was 0.65 per thousand in October while the reported mortality rate from injury decreased from 1.03 per thousand to 0.88 per thousand.

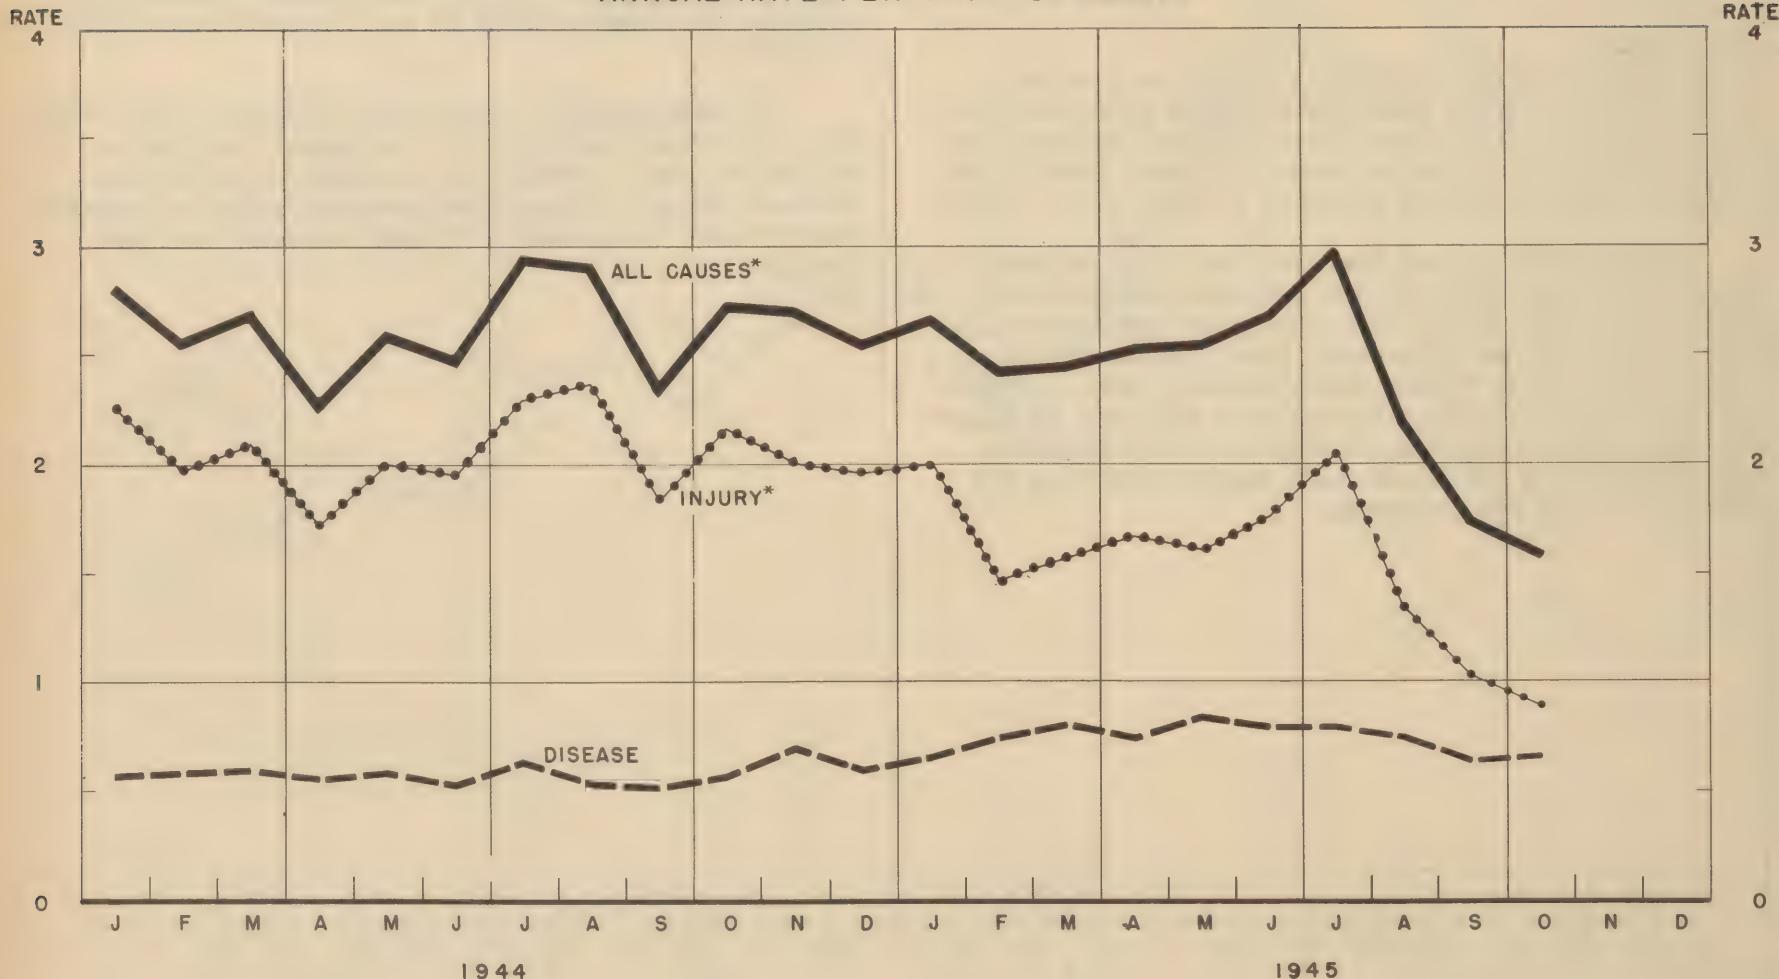

It should be noted that the reporting of deaths on Forms WD AGO 8-122 is not complete, particularly for deaths from injury, for which the understatement may be as great as 10 percent (see Special Report on Deaths in 1944 in Weekly Health Report, Vol. V, #27). The mortality rate from injury when adjusted to allow for this under-reporting is about .97 per thousand, resulting in an estimated total death rate from all causes of 1.66 per thousand.

NON-EFFECTIVE RATE:

The none-effective rate for Army personnel stationed in this country was about 28 per thousand in October, as compared with 26 per thousand reported for September.

The mean number of non-effectives per day in the Army as a whole in October is estimated, on the basis of preliminary reports from overseas, as at 42 per thousand troops. Non-effectives remaining in oversea theatres are estimated at 19 per thousand oversea troops.
